

Helicopter plan

Print this page from your computer. Size isn't critical but the full pattern could be about the size of an 8 1/2" x 11" sheet of paper. If wanted adjust the size on a copy machine. Either trace images to stock or cut patterns from the sheet and attach to wood with a spray adhesive like Scotch 45.

Use hardwood for sturdy construction. Attach two propellers using a small washer between each prop and the helicopter body. Tighten screw then back out slightly until blades spin easily. Sand parts then apply finish. Makes a sturdy, fun gift for youngsters.

Taper back on a bandsaw like this overhead view so back is about 3/4" thick.
